Forecast For The United Kingdom
Issued by Met Office Exeter
at 1500 on Thursday 23 Sep 2021

UK Outlook for Friday 8 Oct 2021 to Friday 22 Oct 2021:
Confidence is typically low through this period. Current signals suggest the higher pressure is more likely over the south during this period, giving generally dry and settle conditions. More settled conditions may spread northwards at times. Lower pressure in the north will bring periods of showers or longer spells along with stronger winds. Temperatures most likely around or above average.
